LAB-4

1. Write a python script to print hello world.

```
import tkinter as tk root=
tk.Tk()

canvas1 = tk.Canvas(root, width = 300, height = 300)
canvas1.pack()

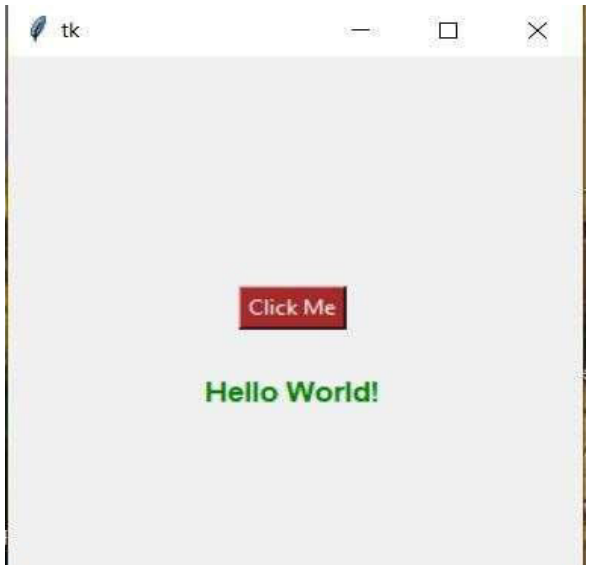
def hello ():

    label1 = tk.Label(root, text= 'Hello World!', fg='green', font=('arial', 12, 'bold'))
    canvas1.create_window(150, 200, window=label1)

button1 = tk.Button(text='Click Me',command=hello, bg='brown',fg='white')
canvas1.create_window(150, 150, window=button1)

root.mainloop()
```

Output:



2. Convert the script into executable (use pyinstaller or py2exe – any of your choice).

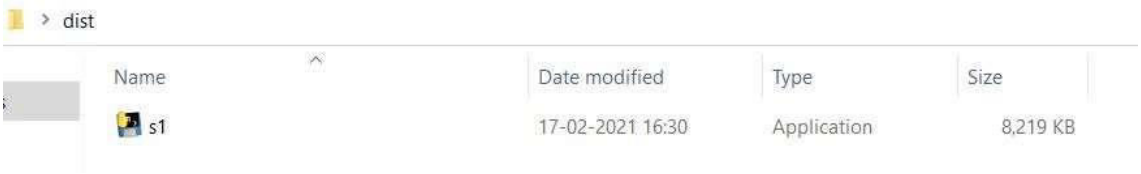
LAB-4



3. Schedule a task named “Python execution" to run the above executable on the first Monday of every month.

Schtasks /create /sc monthly /d 1 /tn “python exe/tr “C:\Users\Acer\Desktop\s1.exe /st 11:55

```
Folder: \MyTasks
TaskName                                 Next Run Time          Status
======================================== ====================== ===============
python Execution                         01-03-2021 11:00:00    Ready
```

4. Schedule a task named “Executer" to run notepad starting at 5:00PM with no end time.

```
Folder: \MyTasks
TaskName                                 Next Run Time          Status
======================================== ====================== ===============
Executer                                 17-02-2021 17:25:00    Ready
python Execution                         01-03-2021 11:00:00    Ready
```

5. Schedule a task named “Executer2" to run notepad starting at 5:00PM and automatically terminating at 5:40PM hours every day

```
Folder: \MyTasks
TaskName                                 Next Run Time          Status
======================================== ====================== ===============
Executer                                 17-02-2021 17:30:00    Ready
EXECUTER2                                17-02-2021 17:38:00    Ready
python Execution                         01-03-2021 11:00:00    Ready
```
